

Assembling the drying rail set

The drying rail set consists of eight suspension bands and a strong, foldable aluminium rail.

Pull the toggle at the top end of the band through the O-ring at the top of the Nordic tipi.

In the same way, attach the bottom end (with the adjustable buckle) to the O-ring half-way up the wall.

Sizes 5 and 15 have eight holders for the drying rail. Sizes 7 and 9 have two sets of holders (16). Use the lower ones.

Unfold the drying rail and put the joints together.

Assemble the drying rail around the central pole.

Hang it up with the toggles and the O-rings.

Stretch the eight suspension bands.

For sizes 7 and 9, you can add a smaller, extra drying ring. It is attached to the upper holders on the suspension bands.
